

Tajbir Hossain

Full-Stack Software Engineer (Backend-Focused)

Dhaka, Bangladesh · mdtajbirhossain030@gmail.com · +8801961211915 · github.com/tajbirhossain

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years building production systems for international clients as an independent consultant. Primary strength in backend development: Node.js, Express.js, TypeScript, PostgreSQL, Redis, BullMQ, and Docker, with hands-on work on **concurrency-safe write paths, idempotency, and load-tested API reliability**. Shipped SaaS platforms, APIs, and a Play Store mobile app end-to-end. Seeking a remote full-stack or backend role at a product company.

TECHNICAL SKILLS

Backend: Node.js, Express.js, TypeScript, JavaScript (ES6+), REST APIs, JWT Auth, Zod validation, Swagger/OpenAPI, Prisma

Databases: PostgreSQL, MongoDB, schema design, indexing, transactions, query optimization

Caching, Queues & Reliability: Redis, BullMQ, rate limiting, retry/exponential backoff, **idempotency keys**, row-level locking / transactions, **concurrency/load testing (autocannon/k6)**

AI Integration: Gemini API for structured data extraction from unstructured text/image input

Frontend: React.js, Next.js, React Native, Tailwind CSS, HTML5, CSS3

DevOps & Tools: Docker, Git, GitHub Actions, Linux, Vercel, Postman, Supabase

PROFESSIONAL EXPERIENCE

Independent Full-Stack Software Engineer *May 2020 – Present*

Self-employed · Fiverr (Level 2 Seller)

Delivered 100+ client projects across SaaS, APIs, and mobile apps for US, UK, and EU clients. Selected work below.

- Built production REST APIs with Node.js, Express.js, PostgreSQL, MongoDB, and Prisma — JWT authentication, RBAC, and multi-step business workflows for client SaaS products.
- Standardized deployments with Docker across multiple client projects, eliminating recurring environment mismatch issues reported during handoffs.
- Implemented high-volume data exports with Node.js streams on a research-platform client project, avoiding memory spikes during large report generation.
- Owned full delivery cycles independently: requirements, architecture, implementation, deployment, and post-launch support in async remote settings.

Frontend Web Developer *January 2021 – December 2021*

Tortoiz Themes (part-time, concurrent)

- Built commercial React templates for ThemeForest with reusable components and cross-browser compatibility.
- Improved render performance on low-end devices, supporting sustained sales and positive customer ratings.

SELECTED PROJECTS

Subscription Tracker (Android + Backend) — TypeScript · Node.js · PostgreSQL · Redis · BullMQ · Gemini API

- End-to-end subscription-tracking platform: Express/TypeScript API on PostgreSQL (Supabase), offline-first Android client with automatic sync on reconnect — with Redis used across caching, idempotency, rate limiting, and background job processing.
- Replaced a planned SMS/notification-parsing pipeline with a Gemini API-based image/text extraction service — detects subscription name, price, and currency from screenshots or pasted text, with confidence scoring and manual-entry fallback for low-confidence reads.
- **Implemented idempotency keys and transaction-based concurrency protection on subscription create/update endpoints; verified under concurrent load with a custom script simulating 50 simultaneous duplicate requests, eliminating duplicate subscriptions.**

- Built a BullMQ-based background job system (trial/renewal reminders, scheduled currency-rate refresh, expired-session cleanup) with retry and exponential backoff on failure.
- Added Redis-cached external currency-rate integration with TTL and cached-fallback on API failure, keeping conversions available during upstream outages.
- Covered core API and domain flows (auth guards, subscription CRUD, concurrency 409s, Redis idempotency, Gemini receipt extraction with regex fallback, currency rate fallback chain, job dedupe IDs) with a Jest/Supertest suite — 55 tests.
- Live demo: [link] · Backend: <https://github.com/tajbirhossain/microsubtrackerBackend> · Android app (expo): <https://github.com/tajbirhossain/microsubtracker>

JBH International Limited — *React Native · Expo · Supabase*

- B2B multi-vendor marketplace with advanced search and filtering across garment product categories.
- Identified and fixed a concurrency/race-condition bug in stock-update flow causing negative inventory counts and overselling during high-traffic checkout events; resolved with database transactions and pessimistic row-level locking (FOR UPDATE), verified with 20 concurrent purchases against a 1-unit product — 0 units oversold.
- Optimized performance on low-end Android devices; published on Google Play Store with 2,050+ downloads and active daily users.
- Live link: <https://play.google.com/store/apps/details?id=com.jbh.internationallimited>
- Codebase walkthrough available on request — private repo

EDUCATION

SK National University | 2023 – Present (expected 2027)

Bachelor of Arts — Political Science
